

# PUSKÁS ARÉNA BUDAPEST

The stadium, totally rebuilt and completed in November 2019, sees the installation of Macrolux Rooflite greca 315/56.8 corrugated polycarbonate compact sheets in the translucent roof section, in a thickness of 2 mm, manufactured by Stabilit Suisse.

The combination of excellent transparency and maximum weather resistance make this product the best solution applicable to these projects.

After hosting several international competitions, the stadium and the sheets will be the stars of UEFA Europa League final match between Sevilla FC and AS Roma.
